

Protection of Workspace

Sanosil S010 is a disinfectant suitable for the needs of professional users. It can be used in concentrated or diluted form. This product is suitable for the elimination of pathogens and is also used as a spray disinfectant in airspace. The Sanosil S010 is ready to use. It does not contain alcohol, chlorine, VOCs, dyes or fragrances.

Disinfectant for Aerosol Applications

Disinfection by aerosol spray is used wherever effective and rapid treatment of large areas¹ is required. It is suitable for premises pre-cleaned in the medical, food, pharmaceutical and commercial sectors.

Aerosol disinfection, thanks to its complete surface coverage, is the ideal solution in the fight against resistant micro-organisms such as COVID-19 or the proliferation of germs of unknown origin.

The dry disinfection mist consists of two active substances: hydrogen peroxide and silver. This combination is perfectly suited for aerosol disinfection.

Following the aerosol disinfection, no other action is necessary.

¹ For a surface of 1,000 m²: 2 litres of Sanosil S010 is required and can be sprayed in less than 60 minutes.

The disinfection by fogging allows homogeneous disinfection of the entire room. Even hidden and hard-to-reach areas, which cannot be reached with a conventional disinfection method, are reliably disinfected. Pathogens that would remain on surfaces during conventional cleaning are disinfected and removed by completely disinfecting the room by fogging.

Based on the proven Sanosil formulation of highly stabilized hydrogen peroxide/colloidal silver, after use, hydrogen peroxide decomposes in water with no harmful fumes/odours. In trace amount, silver reinforces the disinfecting efficiency and prevents microbial revival via the deposition effect.

The disinfectant works best when it dries on the treated surface. Do not rinse after drying.

Areas of use of **Sanosil S010**:

- Transport vehicles (bus, metro, ambulance, emergency vehicle)
- Office building
- Air conditioning and ventilation equipment
- Public toilets and showers
- Elevators and stairs (rails, control panels)

Take the test!
**Contact us and we will demonstrate to you, within 10 minutes,
how fast and easy the treatment process is!**
